The Department of Biological Sciences

Biology explores the structure, function, and evolution of diverse living systems. It addresses some of the most important issues of our time—genetic engineering, stem cell research, obesity, cancer, and the effects of global warming. Majoring in Biology prepares students to pursue a career in research, teaching, or the allied health sciences. It is also relevant to careers as diverse as environmental policy, law, public health, creative writing, and textbook development.

Mission

The mission of the Biology major is to provide students with a broad education in biology. To this end, students are offered a range of lecture courses that span the molecular, physiological, and ecological levels of organization. Students also complete laboratory courses that help them learn how to design and test hypotheses, use modern scientific equipment, and interpret data. Finally, students learn scientific communication skills by critiquing research articles, writing laboratory reports and research papers, and participating in oral presentations and debates. The department encourages students to become involved in a research project under the guidance of a faculty member at Barnard or elsewhere in New York City.

Student Learning Outcomes

Students graduating with a major in Biology should be able to attain the following outcomes:

- Demonstrate an appreciation of the many different life forms on planet Earth.
- Have the ability to discuss a biological phenomenon from many different levels of organization (e.g., discuss HIV from the perspective of structure to host immune response to evolutionary and epidemiological issues).
- Describe the basic features of Mendelian genetics and the central dogma of molecular biology; understand the basic physiological processes of at least one organism; and demonstrate an understanding of population-level processes.
- Make an oral presentation on either an original research project or a published primary research paper.
- Generate a testable hypothesis and develop and execute a controlled experimental design.
- Write an original scientific paper and/or a review article.

Research

Students are strongly encouraged to engage in research at Barnard. One or both year-long courses, BIOL BC3591 / BIOL BC3592 Guided Research

& Seminar and BIOL BC3593 / BIOL BC3594 SENIOR THESIS RESEARCH # SEMINAR, may be used to fulfill major requirements. The variable-credit semester-long course, BIOL BC3597 GUIDED RESEARCH, may be used for degree credit.

In addition to conducting research during the academic year, students are encouraged to pursue summer research internships. Barnard faculty engage many students in paid research projects during the summer through the [Summer Research Institute \(SRI\)](#) at Barnard. The departmental office also has information about summer internships outside of Barnard. In addition, the department awards funds on a competitive basis to support summer research not otherwise funded by internships.

Introductory Course Selection

The Biology Department offers several options at the introductory level. Students should select courses on the basis of their preparation and background in biology.

Students who took advanced biology in high school should enroll in the 1500-level sequence. This sequence can be started either in the fall [Introduction to Organismal & Evolutionary Biology: BIOL BC1500 (Lecture) and BIOL BC1501 (Lab)] or the spring [Introduction to Cellular & Molecular Biology: BIOL BC1502 (Lecture) and BIOL BC1503 (Lab)]. This sequence fulfills the science lecture and laboratory portion of the General Education Requirement (GER), as well as the premedical requirement in biology. Please note that the Foundations distributional requirements for the sciences includes two science lecture courses, one of which must include a laboratory, but both do not necessarily need to be taken from the same scientific discipline.

Students with little or no experience in biology should enroll in the 1000-level sequence, which provides an appropriate introduction to important concepts in the field. BIOL BC1002 Global Health and Ecology includes a laboratory component (BIOL BC1012) and BIOL BC1001 REVOLUTIONARY CONCEPTS IN BIOL consists only of a lecture component. Taken together, these courses fulfill the science General Education Requirement. Students who wish to move on to the 1500-level sequence may do so upon completion of one or both of these courses.

Students must complete the entire 1500-level sequence (BIOL BC1500, BIOL BC1501, BIOL BC1502, and BIOL BC1503) for the biology major or minor and for premedical requirements.

AP Course Credit

Students who passed the Advanced Placement examination in biology with a grade of 4 or 5 receive 3 points of credit toward their degree. However, AP credit neither helps fulfill the science GER nor exempts a student from any introductory course.

Requirements for the Major

To declare a major in biology, submit a [major declaration form](#) via Slate.

There are five ways to complete a biology major. These are called "tracks:"

1. General Biology
2. Cellular and Molecular Biology
3. Physiological and Organismal Biology
4. Ecological and Evolutionary Biology
5. Computational Biology.

All tracks within the major must fulfill common foundational and senior capstone requirements. Tracks 2-4 concentrate on a specific level of biological organization. Please refer to the [biology major checklists](#) to see a list of requirements for each version of the biology major.

Introductory Biology Sequence

Every biology major must complete **ALL** of the following introductory biology and genetics courses.

Introductory Biology Fall Offerings:

BIOL BC1500	INTRO ORGANISMAL/EVOL BIOL	3.5
BIOL BC1510	BIOL BC1500 DISCUSSION SECTION (This is a co-requisite for BIOL BC1500.)	
BIOL BC1501	INTRO LAB/ORGANISMAL#EVOL BIO	2
BIOL BC1511	BIOL BC1501 RECITATION (This is a co-requisite for BIOL BC1501. It is asynchronous.)	

Introductory Biology Spring Offerings:

Genetics Requirement (Offered Fall & Spring)

BIOL BC2100	MOLECULAR # MENDELIAN GENETICS	3
-------------	--------------------------------	---

It is recommended, but not required, that Genetics be taken immediately after completing the 1500-level introductory sequence. Though it is a pre-requisite for many upper-level courses, it is not required for all. For example, sophomores interested in pursuing the Organismal & Physiological or Ecology & Evolutionary tracks are encouraged to take BIOL BC2280 Animal Behavior, BIOL BC2840 Plant Evolution and Diversity, or BIOL BC3360 Physiology even if they have not yet taken genetics.

Five Upper-Level Lecture Courses

Students must complete five upper-level lecture courses. Requirements for each track are listed below:

- **General Biology (GB):** Five upper-level lecture courses with at least one course from each of the three categories (C&M, P&O, and E&E).
- **Cell & Molecular Biology (C&M):** Four upper-level lecture courses from the C&M category + one from another category (P&O or E&E)
- **Physiology & Organismal Biology (P&O):** Four upper-level lecture courses from the P&O category + one from another category (C&M or E&E)
- **Ecology & Evolutionary Biology (E&E):** Four courses from the E&E category + one from another category (C&M or P&O)

Please Note:

1. Although some courses are listed in multiple categories, a student can only use a course toward one of the categories.

Please Note:

- Often, a lab course requires that a student have taken a prerequisite lecture offered in the opposite semester. Sometimes, the lecture may be offered as a co-requisite in the same semester.
- Students may take laboratory courses at Columbia (or other institutions) to satisfy the lab requirement, with permission from the Associate Chair.
- **Research Option:** The year-long Guided Research & Seminar course (BIOL BC3591 followed by BIOL BC3592) can be used to fulfill up to two upper-level labs in all tracks except for Computational Biology. This course is only available as a fall to spring sequence. In Guided Research and Seminar, students complete an original research project in a lab, and both write a scientific paper and give a poster presentation of their work at the Annual Barnard Biology Research Symposium. **Note:** Seniors may not enroll in Guided Research and Seminar if they are enrolled in Senior Thesis Research and Seminar. For more information, visit the biology department's [Undergraduate Research](#) page.

Senior Capstone Experience

All Biology majors must complete the Senior Capstone Experience with either of the following two options:

1. One semester of BIOL BC3590 SR SEM IN BIOLOGY

In Senior Seminar, students participate in a seminar focusing on primary literature, and both compose and give a presentation on a senior thesis in the format of a literature review. Topics vary from semester to semester. To fulfill the Computational Biology track senior capstone requirement, students must enroll in Professor Lopatkin's Bacteria by Design topic.

Spring 2023 Topic: Bacteria by Design:

In this course, students will explore in-depth the field of synthetic biology with a focus on engineered bacteria. Topics include fundamental design principles, environmental and clinical applications, as well as ethical implications.

OR

2. The yearlong Senior Thesis Research and Seminar (BIOL BC3593&BIOL BC3594)

In Senior Thesis Research and Seminar, students complete an original research project in a lab, and both write a scientific paper and orally present their work at the Barnard Biology Research Symposium. This course is only available as a fall to spring sequence. For more information, visit our Undergraduate Research page.

Please Note: Seniors enrolled in Guided Research and Seminar to fulfill two upper-level labs for their major cannot take Senior Thesis Research and Seminar at the same time. Instead, they must complete their senior capstone experience with BIOL BC3590 Senior Seminar.

Chemistry Requirement (GB, C&M, P&O, and E&E)

Majors in the GB, C&M, P&O, and E&E tracks must complete at least one semester of General Chemistry (with laboratory) and at least one semester of Organic Chemistry (with laboratory). To see which courses will be offered this semester, we encourage students to visit the [CU Directory of Classes](#) for Chemistry at Barnard and at Columbia. Equivalent courses at Columbia may be taken in lieu of the Barnard Chemistry courses. This is an important topic to discuss early with your advisor.

- **General Chemistry** lecture (CHEM BC2001) and lab (CHEM BC2012) (offered in the fall only)
- **Organic Chemistry** lecture (CHEM BC3230) and lab (CHEM BC3328)

HSPP BC1001 Research Apprenticeship Seminar. 3 points.

This year-long course is 3 pts (1.5/semester)**Not offered during 2023-2024 academic year.**

Prerequisites: This course is open to 16 first-year students who are also enrolled in an introductory lab science sequence; applications will be made available via the first-year class blog through the Dean of Studies Office.

The course will meet in a seminar format, and will discuss how research problems are defined, how scientists immerse themselves in the existing literature on a topic, how researchers craft experimental protocols and collect data, and how data can be used to test hypotheses. Students will also consider science stories in the *New York Times* and lead formal debates about ethical and social issues. Occasionally, the seminar period will be devoted to tours of faculty science labs to learn about the research that Barnard professors conduct and the research opportunities available on campus.

Additionally, students will participate in a month-long laboratory rotation each semester. During the rotation period, each student will spend 3 hours per week shadowing a Barnard junior or senior Research Intern who is conducting a year-long research project. In addition to this exposure to research at Barnard, students will discuss how to obtain summer science internships in laboratories off campus. Seminar assignments will include readings about the research process, as well as short library-based research projects about scientific claims in textbooks. In the fall, students will develop their presentation skills in a session with Barnard's Speaking Fellows. In the spring, each student will deliver an oral presentation about the research career of a scientist of her choosing.
