

# ECONOMICS AND STATISTICS

The Economics-Statistics major provides the student with a grounding in economic theory comparable to that provided by the general economics major; and also exposes the student to rigorous and extensive training in Statistics. Students choose between two tracks of the major. The Computational Track consists of coursework in applied statistical methods. It is recommended for students preparing to apply statistical methods in the social sciences. The Theoretical Track consists of calculus-based probability, and the theory of statistical inference. It also provides some practical training in data analysis.

Available to students of the Class of 2021 and later.

**ECON BC3033 INTERMEDTE MACROECONOMC THEORY. 4.00 points.**

(Description for summer and semester course) This course introduces macroeconomic theory for the analysis of aggregate variables such as income, employment, prices, and the interest rate. The first part of the course is devoted to studying the determination of the aggregate demand in the goods markets and the equilibrium of monetary markets, using an IS-LM model extended with elements of the banking sector and the open-economy framework. Next, the supply-side of the economy is examined with special attention to the labor market, wage setting and price setting behavior. The Phillips Curve (PC) introduces the tradeoffs between inflation and unemployment, and the role of expectations for inflation dynamics. The integrated IS-LM-PC model is then used to evaluate macroeconomic policies that aim at stabilizing the economy with output produced at its potential level and the inflation rate at the central bank target. The recent episode of high inflation is simulated with a proper numerical calibration of the IS-LM-PC model
